## 40 YEARS OF EXPERIENCE

- 1985** — **SAEXPA, founded in 1985 in San Adrián de Besós.** From the outset, the company distinguished itself in the metallurgy industry by specialising in the production of metal wire display units and commercial equipment, gaining a reputation for its commitment and the quality of its products.
- 1994** — **1994 marked a significant turning point for SAEXPA with its entry into the French market.** This expansion led the company to diversify its production to include components for the automotive industry in addition to its metal wire items, thereby expanding its range and consolidating its presence on the international market.
- 2007** — **The target market expanded beyond France to other European countries.** 2007 marked one of the most important steps for SAEXPA, which specialised in the logistics sector with the production of mesh decks for racking.
- 2022** — **In 2022, the acquisition of the company by Defim Orsogrill, part of the Feralpi Group, the European leader in the steel industry, marked another turning point in SAEXPA's history.** This step ushered in a new era. The future took on a new perspective and SAEXPA was strengthened by the various synergies within the Group and world-class resources and knowledge.
- TODAY** — **With the aim of continuing to grow by adapting to market demands, SAEXPA is focusing its attention on the logistics sector.** Today, SAEXPA is no longer just a product supplier but a major player in the logistics solutions market. Its wider and more diverse range now consists of mesh and electrowelded grating solutions. The move to a much larger and more modern production plant will allow not only growth in size but also in quality in the coming years.

Our decks can be found all over the world. In our 40-year history we have delivered decks from Europe to the United States to South America.

## FERALPI GROUP

Drive for innovation, partners' trust, people's expertise, research and development projects to achieve maximum efficiency, moving towards a circular economy. These are the elements that best describe the Group and outline its path towards future goals, focusing on quality, decarbonisation and inclusion.

Feralpi Group is among the leading steel producers in Europe and specialises in the production of steels for both construction and special applications. Starting with the parent company Feralpi Siderurgica, founded in 1968 in Lonato del Garda (Brescia), an uninterrupted growth path has led to the international group present today in 7 countries.

From April 2022, Saexpa is a wholly-owned subsidiary of Defim Orsogrill and is fully and vertically integrated into the Feralpi Group structure, which guarantees full support for the multi-year development plan of the Diverse Products Business Unit.

DEFIM ORSOGRIL AND SAEXPA

## TOGETHER WE FORM THE FERALPI GROUP'S DIVERSE PRODUCTS BUSINESS UNIT

We are the only European player specializing in the production of electrowelded mesh and grating as well as a unique range of fencing and facade cladding for industrial, residential and civil use.

In addition, thanks to a recent acquisition, we offer solutions for the logistics market with a wide range of products such as shelves and fall protection panels.

## THE SPECIALISTS IN ELECTROWELDED SOLUTIONS

Saexpa and Defim Orsogrill are the two Feralpi Group companies specialising in the production of standard and customised electrowelded mesh and grating solutions.

Thanks to more than 50 years of expertise, we are present in markets all over the world with products that combine flexibility and practicality for every industrial, logistics, construction, residential and sports sector.

We are committed to developing solutions adapted to each customer, precisely responding to the specific needs of different markets and sectors, guaranteeing innovation, quality and concrete results.

## THE NUMBERS TELL THE STORY OF OUR GROWTH

**100+**  
EMPLOYEES  
IN THE COMPANY

**13.000 m<sup>2</sup>**  
OF COVERED PLANT

**10.000 t**  
OF TOTAL ANNUAL  
PRODUCTION

**2.000 km**  
OF DECKS  
PRODUCED PER YEAR

## CUSTOMISED SOLUTIONS FOR LOGISTICS

We offer customised solutions tailored to the needs of each application. Each project can be created from scratch to perfectly meet the specific requirements, guaranteeing a unique service to combine quality and cost-effectiveness.

Our logistics services are designed to support every stage of the process, optimising efficiency and providing tailored solutions for specific business needs.

## DECK SOLUTIONS

### PICKEX

Standard maximum load capacity 350 kg/UDL\*

Using flat supports welded to the panel, the Pickex electrowelded mesh delivers quick and safe handling of the boxes.

FLAT SUPPORTS

SUITABLE FOR LIGHTWEIGHT PRODUCTS

### LOADEX

Standard maximum load capacity 1200 kg/UDL\*

With round or flat supports welded to the panel, the Loadex electrowelded mesh decks can support loads for all palletized goods requirements.

OMEGA SUPPORTS

SUITABLE FOR PALLET USE

### TRAMEX

Standard maximum load capacity 2250 kg/UDL\*

The galvanized electrowelded grating panel is a strong, safe, and lightweight solution for storing heavy loads or when the exact position of the load on the racking is unknown.

FOR CONCENTRATED LOADS

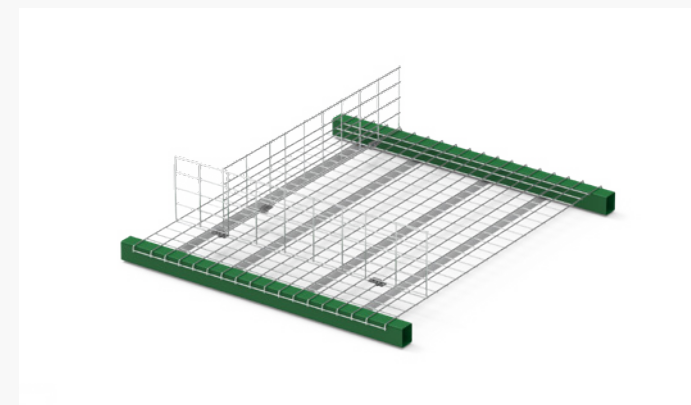

SUITABLE FOR HEAVY LOADS

\*For specific load capacities, please contact us.

## DECK ACCESSORIES

We offer a wide range of shelf and drop panel accessories to complement your logistics projects. Our accessories have been carefully researched and designed to provide the best value to your project and meet different needs.

Find more accessories at [www.saexpa.com](http://www.saexpa.com)

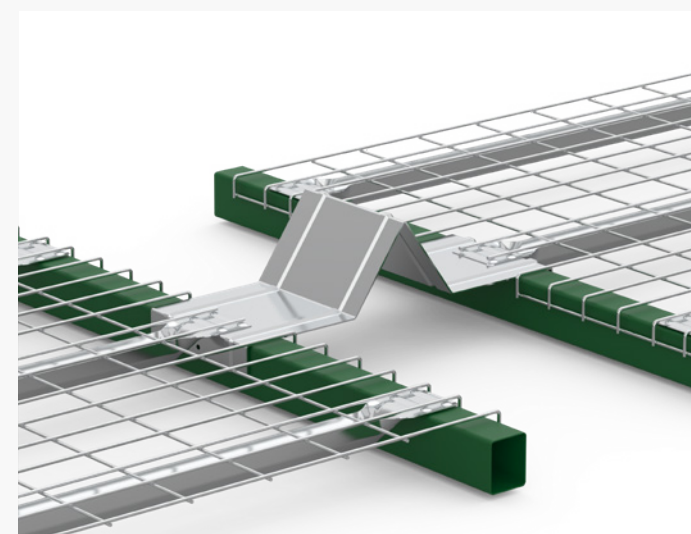

### CLIP-IN DIVIDERS

The clip-in dividers are used in warehouses and storage areas to organise and prepare products on the racking. They can be installed perpendicular or parallel to the beams. They are attached to the deck with robust connectors, for quick and easy repositioning. We also offer tailored dividers to fit specific sizes, mesh sizes and wire thicknesses for greater stability and a polished finish. Like the other models, these dividers are designed with smooth edges to maximise user safety.

### HANGING DIVIDERS

Hanging dividers are used in logistics areas or sorting centres to organise and separate goods on the racks. They can be installed perpendicular or parallel to the beams. The hanging dividers are attached to the deck above using hooks and to the rack below with protruding wires. This configuration provides maximum stability but requires a mesh top shelf. These dividers are ideal for larger sorting areas. Tailored dividers are available with options for specific sizes, mesh sizes and wire thickness for increased durability and a polished finish. They are also designed with smooth edges to maximise user safety.

### PALLET STOPPER

The pallet stopper improves workplace safety by preventing damage to the products and equipment. Positioned between two racks, it prevents pallets from being pushed too far back and stops the pallets from falling or blocking other pallets. Available in both sheet metal and wire versions.

- + DIVIDE AND ORGANIZE PRODUCTS ON SHELVING WITH HANGING OR CLIP-ON DIVIDERS
- + CREATE SPACING SPACES/AREAS FOR SMOKE DISSIPATION AND MEET FIRE AND SAFETY REGULATIONS

## WALLEX ANTI-COLLAPSE

### WALLEX

WALLEX is the most economical and effective solution for making your racking safe. Despite the fact that it is lightweight, the mesh reinforcement staves ensure that the panel is rigid. Available in pre-galvanized material.

MOST VERSATILE SOLUTION

### WALLEX-2

WALLEX-2 is the solution that, thanks to the two tubes, upper and lower, increases the rigidity of the panel and improves the safety performance of your racking. Available in pre-galvanized material with the option of painting.

ENHANCED RIGIDITY

SUPERIOR SAFETY PERFORMANCE

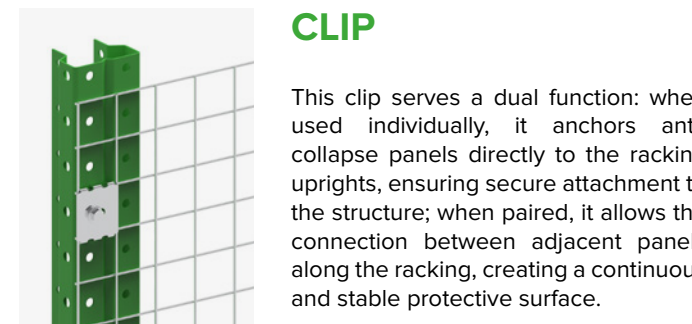

### WALLEX-5

WALLEX-5 is the classic solution for the anti-collapse sector which, with five painted tubes, delivers a pleasant appearance whilst also making the racking safer. Available in pre-galvanized and painted material.

CLASSIC SAFETY PANEL

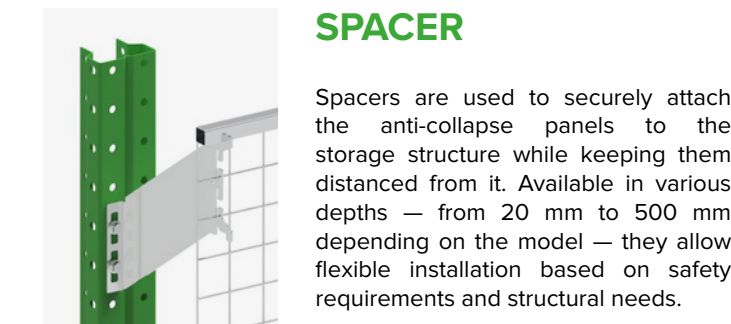

SOLID AND RELIABLE

## WALLEX ANTI-COLLAPSE ACCESSORIES

### CLIP

This clip serves a dual function: when used individually, it anchors anti-collapse panels directly to the racking uprights, ensuring secure attachment to the structure; when paired, it allows the connection between adjacent panels along the racking, creating a continuous and stable protective surface.

### SPACER

Spacers are used to securely attach the anti-collapse panels to the storage structure while keeping them distanced from it. Available in various depths — from 20 mm to 500 mm depending on the model — they allow flexible installation based on safety requirements and structural needs.
